

Press release – BioVariance GmbH again one of the most innovative companies in Germany

Waldsassen, March 05, 2019

The statistics portal “Statista” and the business magazine “brand eins Wissen” have selected Germany's most innovative companies for the third time. For the second year in a row, BioVariance GmbH ranks among the 13 most innovative companies in the category chemistry, pharmaceuticals and biotechnology (number of employees less than 250). Especially in the areas of processes, products and services the start-up was successful.

Dr. Josef Scheiber, Managing Director: "Innovative products and services are born in the minds of employees whenever creativity and personal development are encouraged during a work process. Innovations are extremely important to us and ensure the success of our company."

About the ranking

For this year's ranking, more than 1,900 company representatives, 400 experts from the Berlin Institute for Innovation and Technology (iit) and more than 20,000 executives from the Statista expert panel "Expert Circle" selected 496 highly innovative companies from thousands of enterprises in 20 sectors. The interviewees evaluated innovation in the following three areas: products and services, process innovation and corporate culture.

About BioVariance GmbH

BioVariance GmbH, was founded in 2013 in Waldsassen and offers complex biomedical data analyses to customers from the pharmaceutical, biotechnology and healthcare sectors. Another field of activity is the development of customized software solutions for these industries. This also includes the development of mobile applications, especially for personalized medicine. The web tools of BioVariance GmbH automatically collect, process and analyze different types of data and thus enable the use of large amounts of data.
